Predator, Egg-eating age structured, and prey interactions: some simple cases, 89:209
Predator-prey systems, Gause type of models of, limit cycles in, Uniqueness of, 88:67
Prey, and Egg-eating age-structured predator interactions: some simple cases, 89:209
Probabilities, transforming central rates into: Parity progression in the presence of fetal death, 88:85
Pseudocooperative shapes of Scatchard plots: Ring formation in divalent-receptor-divalent-ligand interaction, 92:75
Pulse fishing may be superior to selective fishing, 89:177
Pulse-wave simulation, Intracranial compartmental, 89:149
Pupil light reflex, human, with "mixed" and delayed feedback, Complex oscillations in, 90:183
Quasiidentifiability relations, for catenary models, 88:1
Receptor, divalent-receptor-divalent-ligand interactions, Ring formation in, pseudo-

cooperative shapes of Scatchard plots, 92:75
Receptor-ligand binding, Scatchard model for, Dynamics of the, 89:225
Receptor-mediated endocytosis, Convective flow effects in, 89:9
Refractory neuron model, The. System identification based on point processes and correlation densities. II., 91:35
Ring formation in divalent-receptor-divalent-ligand interaction: pseudocooperative shapes of Scatchard plots, 92:75
Robust experiment design via maximum optimization, 89:161
Scatchard model, for ligand-receptor binding, Dynamics of the, 89:225
Scatchard plots, pseudocooperative shapes of: Ring formation in divalent-receptor-divalent-ligand interaction, 92:75
Sensory interpretation of neural activity patterns, 88:15
Selection-mutation balance and continuum of alleles models, 91:67
Selective fishing, Pulse fishing may be superior to, 89:177
Shunt, somatic, cable model, obtaining analytical solutions for, Techniques for (erratum), 89:125
SIRS epidemic model, exposure in, Acquired immunity dependent upon, 88:37
Skeletal muscle, volume-conduction calculations for, Spatial and temporal frequency-dependent conductivities in, 88:159
Social factors, some, Model for first birth interval and, 92:17
Somatic cell hybrid panels, design of, Applications of coding theory to, 91:201
Spatial-dependent conductivities, in volume-conduction calculations for skeletal muscle, 88:159
Spiral anisotropy, the effect of, on the electric potential and the magnetic field at the apex of the heart, 88:191
Statistical variability of parameter bounds for n-pool unidentifiable mammillary and catenary compartment models, 91:175
Stochastic model for chemosensory cell movement: application to neutrophil and macrophage persistence and orientation, A, 90:127
Stochastic model of an AIDS epidemic, A methodological study of, 92:201
Structured populations, infectious diseases in, spread and persistence of, The, 90:341
System identification based on point processes and correlation densities. II. The refractory neuron model, 91:35
Temporal frequency-dependent conductivities, in volume-conduction calculations for skeletal muscle, 88:159
Theoretical biology, nonstandard modeling techniques in, Some, 90:201
Thin films, of hemoglobin and myoglobin, carrier-facilitated transport through, An analysis of, 89:1
Time delays, in physiologic control systems, 90:111
Time optimal samples, continuous- and discrete, compartment models of glucose kinetics from, estimating the parameters of, Optimal equidose inputs and role of measurement error for, 89:125
Tissues, normal, cytotoxicity to, Reduction of by new regimens of cell-cycle phase-specific drugs, 92:1
Transcapillary osmotic transients following exercise or burn injury, analysis of, 88:107
Transcorneal drug delivery, Pharmacokinetic model of, 89:53
Transients, osmotic, transcapillary, following exercise or burn injury, analysis of, 88:107
Transmission dynamics of HIV, On the, 90:397
Transplant, heart, recipients, heart rate variability in, dimensional analysis of, 90:49
Transport, carrier-facilitated, An analysis of, through thin films of hemoglobin and myoglobin, 89:1
Tumors, heterogeneous, subpopulations within, differing growth rates of, Unexpected equilibria resulting from, 91:119
Two-compartment population pharmacokinetic model, with destructive sampling, Parameter estimation in, 91:157
Two-prey, one-predator system, with apparent competition and mutualism, A graphical solution to, 91:1

Unilateral circulation compartment model, The, 89:183
Vaccination, for measles, Optimal ages of, 89:29
Vector fields, Newton, Ecology models and, 90:221
Venules, paired, and arterioles, countercurrent exchange of oxygen between, A mathematical model of, 91:117
Volume-conduction calculations for skeletal muscle, Spatial and temporal frequency-dependent conductivities in, 88:159
Wave propagation, Bending, by microtubules and flagella, 90:247
